repressor protein with differential DNa-binding domains.";

DNA CELL BIOL. 14:971-981(1995).

- FUNCTION: MAY FUNCTION AS A REPRESSOR OR SILENCER. PROTEIN, AND MOST LIKELY EXERTS ITS REPRESSING ACTIVITY UPON ZINC-DEPENDENT BINDING TO DNA. MAY BE INVOLVED IN PROPER SPERMATOGENESIS BY REPRESSING THE EXPRESSION OF GENES UNNECESSARY OR INCOMPATIBLE WITH THE MAINTENANCE OF A HAPLOID CELL STATE.

- SUBCELLULAR LOCATION: NUCLEAR.

- SUBCELLULAR LOCATION: NUCLEAR.

- TISSUE SPECIFICITY: BRAIN, HEART, SPLEEN, THYMUS, AND TESTIS.

- TISSUE SPECIFICITY: BRAIN, HEART SPEEN, THYMUS, AND TESTIS.

- TAGES 18-20 (SIMULTANEOUSLY TO THE APPEARANCE OF HAPLOID CELL STAGES. MAXIMAL EXPRESSION IS OBSERVED AROUND 2 WEEKS POSTUMATALLY, WITH THE EXCEPTION OF BRAIN AND TESTIS, WHERE THE EXPRESSION IS HIGHEST IN EARLIER DEVELOPMENTAL STAGES.

- SIMILARITY: BELONGS TO THE KRUEPPEL SUBFAMILY OF C2H2-TYPE ZINC-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TGERPFQCNQCGASFTQKGNLLRHIKLHTGEKPFKCHLCNYACQRRDALTGHLRTHSVEK 199

"Helios, a Teall-restricted Ikaros family member that quantitatively associates with Ikaros at centromeric heterochromatin.";
GENES DEV. 12:782-796(1998).
-!- FUNCTION: ASSOCIATES WITH IKAROS AT CENTROMERIC HETEROCHROMATIN.
-!- SUBCELLULAR LOCATION: NUCLEAR.
-!- SUBCELLULAR LOCATION: NUCLEAR.
-!- TISSUE SPECIFICITY: RESTRICTED TO THE T-CELL LINEAGE. ABUNDANT IN THYMUS, LOW EXPRESSION IN BONE MARROW AND BRAIN AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NO DETECTABLE EXPRESSION IN SPLEEN, LIVER, KIDNEY OR MUSCLE.
ALTERNATIVE PRODUCTS: TWO FORMS OF THIS PROTEIN; HELIOS A AND
B (SHOWN HERE); ARE PRODUCED BY ALTERNATIVE SPLICING.
SIMILARITY: BELONGS TO THE IKAROS FAMILY OF ZINC-FINGER PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  363
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |||| ||:| |: :|: |||| |

I FUNCTION: BINDS AND ACTIVATES THE ENHANCER (DELTA-A ELEMENT) OF THE CD3-DELTA GENE. FUNCTIONS IN THE SPECIFICATION AND THE MATURATION OF THE T LYMPHOCYTE. ALSO INTERACTS WITH A CRITICAL CONTROL ELEMENT IN THE TPO (TEMNINAL DEOXYNOLEDOTIDYLTRANSFERASE) PROMOTER AS WELL AS WITH THE PROMOTERS FOR OTHER GENES EXPRESSED DURING EARLY STAGES OF B AND T CELL DEVELOPMENT.

-: SOBGELLULAR LOCATION: NUCLEAR.

-: SUBSELLULAR LOCATION: NUCLEAR.

-: STGHT FORMS OF THE PROTEIN; IKL-IKB; ARE PRODUCED BY ALTERNATIVE SPLICING. THE SEQUENCE SHOWN HERE IS THAT

BLOSUM62 Scoring table:

SwissProt_37:* **Database**

77977 seqs, 28268293 residues Searched:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The Ikaros gene encodes a family of lymphocyte-restricted zinc
if inger DNA binding proteins, highly conserved in human and mouse.";
J. IRMUNOL. 156:585-592(1996).

- I- FUNCTION: BINDS AND ACTIVATES THE ENHANCER (DELTA-A ELEMENT) OF
THE CO3-DELICAT GENE. FUNCTIONS IN THE SPECIFICATION AND THE
MATURATION OF THE LYMPHOCYTE. ALSO INTERACTS WITH A CRITICAL
CONTROL ELEMENT IN THE TOT (TERMINAL DEOXYNUCLEOTIDYLTRANSFERASE)
PROMOTER AS WELL AS WITH THE PROMOTERS FOR OTHER GENES EXPRESSED
OURING EARLY STAGES OF B AND T CELL DEVELOPMENT.

- I- SUBCELLULAR LOCATION: NUCLEAR.

- I- SUBCELLULAR LOCATION: NUCLEAR.

- I- SUBCELLULAR LOCATION: NUCLEAR.

- I- SUBCELLULAR LOCATION SMALL INTESTINE.

- I- SUBCRELULAR SMALL INTESTINE.

- I- ALTERNATIVE PRODUCTS: SIX FORMS OF THE PROTEIN; ISOFORMS IXI-IK6;

- ARE PRODUCED BY ALTERNATIVE SPLICING. THE SEQUENCE SHOWN HERE IS
P51522 homo sapien
P21506 homo sapien
